RESOLUTION #4

We, the Board Members of PAAG could not conclude what would be the best clinical protocol for administrative detoxification of non-complying patients (fee detox), we highly recommend that Aegis will launch a study to explore alternative protocols for longer periods of detox (i.e., 21 days, 30 days).

We hope that the study will be able to prove successful results with a longer period of fee detox, mainly because it will allow the patients, their physicians and counselors to have additional time for dealing with the cause of the relapse.

PAAG Board Members
